```
public class FordWagonZTW
{

}

public class Model {
    String modelname;
    OptionSet a1 []; //Color

//a1 = new OptionSet(x);
}
Model FWZTW = new Model();

//Model has Options
public class OptionSet {
 String name;
 Option opt[];
}

public class Option {
        String name;
        float price;
}

Each Option has a set of values.

Model contains OptionSet
OptionSet contains Options

- Array of Arrays
 - ArrayIndexOutofBound
 - NPE

if(obj!=null)
   //then try to access it.

Model contains OptionSet
OptionSet contains Option

 - curveball -

all properties will be private.
methods in Option and OptionSet will be protected.

creation of a component - group of classes with access from a single outermost object -
Model -->

Encapsulation at component level -
```
